Recall vs false positive rate (random forest, regime i)
uniform
stratified
attack-aware (uses labels)
host-keyed (5 seeds)
same trade-off as the full model
Attack recall (flow level, log scale)
10^{0}
10^{-1}
10^{-2}
10^{-3}
10^{-5}
10^{-4}
10^{-3}
False positive rate (share of benign flows flagged, log scale)
